

IQ Storage is the Global Leader in Online Storage Solutions.

The Only Complete Player in Disaster Recovery

Using our overseas internal optical network, IQ Storage is the only player in the market that can protect your company from continent-wide outages.

Our 15-node intercontinental high-speed internal network ensures your data will be backed up and secured within a minimum 500 KM radius.

Although specializing in a critical area of data technology, IQ Storage is proficient at simplifying the administration and complexity of traditional backup and recovery setup and procedures.

Using simple, but powerful solutions such as our TeraFast® line of services, you could start having your data encrypted and stored with a 500 KM offsite backup within 1-day of contacting IQ Storage.

Our customer database includes a wide variety of financial institutions, from banks to insurance providers, to military defence contractors. IQ Storage is backing up data from companies who built some of the world's biggest structures, including the US Pentagon.

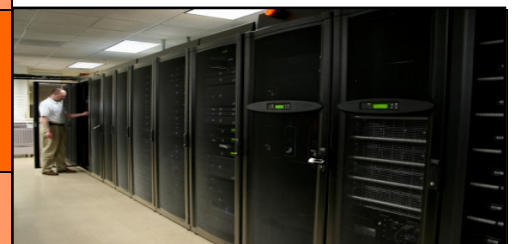

Increased security with decreased costs >>>

Antiquated offsite tape backups have traditionally been costly, slow and unreliable and pose a whole area of other risks due to the recurring physical transportation of sensitive corporate data. Compare this to blasting out heavily encrypted data directly from your office on one of the world's fastest intercontinental internal networks. There are no tapes involved, less labour, better access to stored data and easy automation.

Where Would You Be Without Your Data...

Data loss can cost businesses millions of dollars.

IQ Storage's TeraFast® Enterprise Internet Data Storage Service.

Finally, a storage solution reliable enough for vital data, but easy enough for use with open standards.

IQ Storage's TeraFast® service addresses the feedback from frustrated IT administrators trying to meet today's highly demanding offsite backup requirements without installing proprietary software, without long-term contracts and within or below the confines of today's costs.

See Reverse Side for Details >>>

IQ Storage uses an internal backbone with locations across North America and reaching into Europe to provide its 500+ KM offsite disaster recovery services. Nodes are located in most large North American cities.

Backup Terabytes Fast, Get Started Fast, Get Support Fast, Solve Problems Fast. That's TeraFast®.

The IQ Storage TeraFast® service offering is a comprehensive, flexible storage solution that can help enterprises address backup management challenges today, such as advanced workload balancing across a mainframe, distributed high performance computing clusters and other environments.

Our TeraFast® line of services delegates your online backup file access according to your corporate hierarchy. For example, TeraFast®'s revolutionary design allows a project manager to delegate storage to third-party contractors to ensure data vital to your operations meets regulatory needs without risking access to other data.

Secured and locked-down z/OS mainframes, at the end of the day, often fail to address problems of security integrity due to tape backup procedures. And use of TeraFast® for laptop or workstation backups can provide a flexible solution without committing to proprietary software.

Today's backup challenges need more than a third-party software solution. >>>

Unlike competitors who demand the use of their own proprietary, complex software, IQ Storage's TeraFast® offering allows companies to cost-effectively address their own security requirements in addition to those already offered by TeraFast®.

Backup challenges need more than a third-party software solution. Today's requirements demand a more encompassing approach that includes enterprise-grade long-distance internal networks, hardware, infrastructure and equipment that can only be provisioned by IQ Storage.

As an industry-leading provider of offsite backup and recovery, IQ Storage takes pride in its leadership role.

"We take the responsibility of our leadership role in data protection very seriously."

- Simon Lightstone, CEO
IQ Storage, Inc.
